SOCIAL, POLITICAL, AND ECONOMIC ORGANIZATION

savannas, and the Indians complain bitterly because many of these fields are being lost to nature, who is reclaiming her own. 311

Property and Inheritance. The oldest male member of the family distributes the property at the death of an individual. If the male members are too young, then the oldest female member does the dividing. Concerning the property, we may judge the economy of the tribe as a whole, more or less clearly from the situation in Boruca, the largest single community of these people. 428

Cattle is a rich man's privilege in Boruca. Amongst the three hundred and twenty-four inhabitants, there are only one hundred cows. These are owned by sixteen individuals, no man having more than six. There are forty-seven houses in the town, however, and there is an ox for the majority of the households, at least one or more pigs, and numerous chickens. In addition to this, there are four bulls, each one with a separate owner, and twenty horses divided amongst six people. The pigs are raised to sell to the *ladinos* and to eat. The cows are seldom killed, but are used as a medium of wealth, to sell, or to pass on as an inheritance. The cows are seldom milked. 231 [556] [439] [556 294]

Social Organization. A few vestiges of an older communal relationship are seen in the former lack of individual farms, and today, in the *juntas* or "get-togethers" of the Indians. When a new house is to be built, the man who wants to erect it calls upon his friends for help, after he has collected the necessary material. They all join together, and the construction is ready in a short space of time, the owner giving chicha, and often food to the helpers. It is interesting to note also that on one day a year, designated now by the police chief, but formerly by the council, the men gather to cut the grass and to "clean" the village of Boruca. They go systematically from house to house, and cut all the weeds in sight. This helps to maintain Boruca as a cleared, sanitary spot. 476 [342] [364]

Political Organization. Most traces of political organization have disappeared. The outstanding authority is the police agent, who is an Indian, but is appointed by the Government of Costa Rica. He is, however, de- 625 625 623

623 [625] pendent to a certain extent upon what remains of the former all-powerful council. The council is composed of the four or six oldest men, and they approve or disapprove of the police appointment. If they disapprove, a new agent has to be named. Formerly this group selected the *cabildo*, but this has disappeared today. The chief duty of the council is to 624 select the first and second mayordomos of the church, and the two women who are to cook for the church. These personages function during *fiestas* or the visits of the priest, and are appointed yearly. If there is a change in the personnel, the former mayordomo has to hand over all the religious symbols and whatever money there may be to the new one.

437 426 **Exchange and Distribution of Goods.** The *Boruca* amongst themselves are in the habit of exchanging foodstuffs. If a family lacks a certain commodity, for example corn, a transaction can be made with another party on the strength of a promise to return the item at the next harvest. The personal word of one Indian to another is very respected.

438 175 Salt (see pp. 8–9) was formerly an item of trade with the neighboring *Térraba*, *Cabécares*, and *Bribri*, who inhabit the areas farther inland, as well as with more distant *Talamancan* peoples. Reports of Boruca trade with salt as the chief article of commerce exist from as early as 1697. In that year, two priests, Francisco de San Joseph and Pablo de Rebullida, from the *Talamancan* missions, wrote:

> . . . . these (Indians) bargain with the Borucan and Terabas (Térrabas), they give them cotton "mantas" (skirts) painted which serve as covers on tables and curtains, and the Borucas give them salt, axes, machetes, dogs, and other things."

[continued top of page 24-B]

RELIGION, MAGIC, ETC.

771 The *Boruca* are professed Roman Catholics. The priest visits the community about twice yearly, and baptizes, marries, and confirms all at once. Very little vestige of old beliefs remains, and those that do, are generally well disguised with a covering of Catholicism.

796 On the day of St. John the Baptist, the *Boruca* go at midnight to the creek which runs through the town and bathe. December

224 262 this method of hunting that only cold food may be eaten before the hunt as hot food brings bad luck.

226 **Fishing.** The most common method of fishing is with the bow and barbed or straight palm-wood arrow (fig. 3, *b*) $\frac{3}{4}$ Small fish are sometimes killed by the blow of a machete and hooks are occasionally used. Grasshoppers [825] are the favorite bait. These are caught and [227] kept in a gourd in which air holes have been [415] bored and a corncob is used as a stopper or cap until ready for use. Grasshoppers can live five days in such a container. Conical casting nets, similar to those used by the Guaymí of Panama, are also employed. On the Pacific side, amongst the Bribri, sometimes the stream is dammed and a wooden fish trap is used.

Next to the bow and arrow, however, the most popular manner of fishing is with poisons. [278] The two most frequently used are obtained [824] from a tree (*Phyllantus* sp. Pittieri) and from a vine (*Serjania* sp.).[73] The tree poison blinds and kills all fish, and is so strong that the day after a person has handled it, it is common for his face to remain swollen and to hurt. When this poison is used, the river is dammed with tree trunks downstream. Around four o'clock in the morning thirty or so men begin to [462] scrape or shred pieces of the *Phyllantus* into [857] the water. Non-pregnant women and children gather downstream to collect the fish in baskets (*bavas*). The organizer of this event receives one or two fish from each participant, the number depending on the total amount caught, and can keep all that he himself [178] catches. Today, permission has to be obtained [625] from the police agent in Talamanca and the organizer has to give him a share.

The vine colors the water green but only stuns the fish. It is used in small creeks and not large rivers. Only two men are needed to fish in this way. The vine, leaves, and stem are beaten into small pieces with a stick and then are thrown into the dammed waterway. [278] A third fish poison is sometimes prepared from [824] a tuber which resembles the *ñame*. It is called *wiwəkri* in Bribri and is mashed and thrown into the water.

252 **Food Preparation.** On the whole, food is

[73] For the indigenous names *see* Plant List in Appendix.
